Summary

Enthusiast Information Technology student with hands-on experience building AI-powered automation systems, LLM-based workflows, and intelligent backend applications. Skilled in designing API-driven automation pipelines using Python, FastAPI, LangChain, JavaScript, and modern AI tooling to streamline operational processes. Experienced in developing agentic AI solutions, workflow orchestration systems, and data-driven automation tools with strong problem-solving and systems-thinking abilities.

Work Experience

AI/ML Intern at Enginow, Noida *(Jan 2026 – Feb 2026)*

- Worked on real-world data pipelines by collecting and preprocessing structured datasets using Python and Pandas, handling missing values, outlier treatment, and feature encoding for ML-ready inputs.
- Trained and evaluated classification models, iterating on hyperparameters and preprocessing strategies based on evaluation.

Projects

Smart Agentic Hiring: -

- Designed an AI-driven interview system using LangChain and GPT-4o to conduct voice-based interviews.
- Job recommendations based on resume and Automated job application, generating recruiter-style reports.
- Reduced manual recruiter screening workload by 40% through automated scoring and AI-generated interview questions.

AI-Powered Failure Analyzer: -

- Built a GenAI-powered tool using Python, LangChain, and GPT-4o that automatically ingests CI/CD pipeline logs from GitHub Actions and performs root cause analysis using an LLM-based agent.

Implemented a RAG (Retrieval-Augmented Generation) pipeline using FAISS as the vector store to index historical failure patterns and designed a FastAPI backend exposing a RESTful /analyse endpoint that accepts raw log input and returns a structured JSON report containing: failure category, root cause summary.

AI Disease Diagnosis System: -

- Built an end-to-end AI/ML disease prediction system using Python, Pandas, NumPy, scikit-learn, covering data preprocessing, feature engineering, model training, evaluation, and inference in a local ML pipeline.
- Implemented supervised classification models (Logistic Regression, Random Forest) and evaluated using accuracy, precision, recall, F1-score, and confusion matrix.

Workflow Automation Prototype: -

- Built automated trigger-action workflow using Google Sheets event updates to route notifications and task assignments.
- Implemented automated notification and task-routing logic for workflow optimization and process efficiency.

Education

PVG's College of Engineering, Technology & Management, Pune	B.E. IT (2022 - Present)
Sir Purshurambhau Jr. College, Pune	Higher Secondary (2020 - 2022)
Vishwakarma Vidyalaya English Medium School, Pune	SSC (2009 – 2020)

Skills

AI & Automation: - LangChain, GPT-4o API Integration, Retrieval-Augmented Generation (RAG), Workflow Automation Design, AI Agents.

Programming Languages: - Python, JavaScript, HTML, CSS.

Backend and API's: - Node.js, Express.js, REST APIs, FastAPI, JSON-based Data Flows.

Data and ML: - Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn, NLTK, TensorFlow, Keras, PyTorch.

Databases: - MySQL, MongoDB.

Developer Tools: - Git, VS Code, Figma, Tableau, Google Sheets, Zapier, n8n.

Concepts: - API Integrations, Workflow Orchestration, Process Automation, Systems Design.

Certifications

1. Data Analytics Workshop
2. WAD Competition Certificate

Achievements & Extracurricular

- Joint General Secretary of Information Technology Student's Association (ITSA) 2025.
- Head of the Organizing Committee for Ignition HackVerse 2026 a National-Level Hackathon.
- Won the Student of the Year award for calendar year 2025-26 at PVG's COET & M.
